

Priority Fish Tissue Datasets Needed by the Bioaccumulation Oversight Group

This is the list from my notes of the potential priority data sets that the BOG would want/need access to:

1. NPDES dischargers
2. Santa Monica Seafood Safety Component (Jerry Pollock) – this may be limited in scope
3. Montrose Chemical spill damage assessment (NOAA – Dave Witting)
4. Delta Data (Michelle Woods) – Via email note from Chris Foe to Jay Davis (10/25/2011 4:51 PM): I talked to Michelle Wood. She said that her 15-20 years of fish and water mercury data is not in CEDEN. She recently sent it to Melissa Hall who works for Michael Johnson. Apparently the data is now on Johnson's FTP site. She may have some contractual obligation to upload it to CEDEN, not sure. I will send you an email exchange with Melissa.
5. FERC Datasets (SWRCB, DRW – Erin Ragazzi) – I (J Salisbury) will send Erin an email and follow-up with a phone call next week (Oct. 31st).
6. Data from dredging – most will be lab vs. field samples and will not be useful.
7. EMAP – Most of this should be housed at SCCWRP. FYI – the first year of the Coastal report data generated at SCCWRP is not currently in CEDEN.
